Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3-5, 7-29, 31-51, 54, 55, 57-59, and 62-93 are rejected under 35 U.S.C. 102(b) as being anticipated by Webb (WO 99/54592 previously cited).

Webb discloses a method for treating a well penetrating a subterranean formation, comprising introducing into the well a selectively configured porous particulate material (abstract) wherein the porous particulate material of the selectively configured porous particulate material is a porous ceramic having inherent or induced permeability and wherein the apparent specific gravity of the selectively configured porous particulate material is less than the apparent specific gravity of the porous ceramic. Though not explicitly stated, the coating of the porous ceramic particles with the scale inhibitor or polymer coating makes the porous particulate material *selectively configured*. Further, although not explicitly stated, such coatings on the porous particulate material would yield: a specific gravity or density comparison, ratio, or value; properties inherent thereto; and thickness and weight of coating as claimed. See the entire document, including page 1, lines 13-17 and 26-35, page 2, lines 1-11 and 34-36, pages 3-5, the figure/graph, and claims.

Response to Arguments

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
